

Malabar Public School – native garden

Partner: Malabar Public School
Total funding: \$2,000
Year: 2013
Category: Environment and Sustainability; Education

Orica donated \$2,000 to the environmental initiative undertaken by Malabar Public School P&C for the creation of a natural participatory learning area for students to experience planting and maintenance of Australian native plants and to learn about Aboriginal bush tucker.

This project not only enhances the look of the school playground but also provides a fabulous green space for the students, teachers, parents and the wider school community.

The native garden is being used to teach kids about local plants, edible plants, seasons for planting, planting techniques and garden maintenance. It aims to provide students with valuable first-hand experience and give them a broader understanding of the environment and sustainability.

Students will continue to maintain the garden as part of their curriculum.
